

Champlain

Model 8303 | Model 8302

The Champlain will add a touch of classic style to you room.

Features

Artfully balanced fire

The Champlain gas stove has been carefully designed to present a balanced, gently flickering fire on both low and high settings.

Convenient control

Choose from two different Champlain models to suit your lifestyle. The 8303 with standing pilot works manually or with a wall thermostat. The 8302 with on-demand pilot uses a remote control to keep your home warm and cozy.

True efficiency

The Champlain includes a cast iron heat exchanger above the fire. Natural convective airflow moves air through the vents of the stove to warm your room.
